

SC.912.L.16.10 – Biotechnology – Example 3 Answer

What kind of genetically modified crops would be most successful in wet-tropical countries that are overcrowded?

- A. crops that are drought- and pest-resistant**
- B. high-yield crops that do not need a lot of sunshine**
- C. high-yield crops that are pest-resistant**
- D. crops that are drought-resistant and need a lot of sunshine**

Answer

C. high-yield crops that are pest-resistant

If space is limited, high-yield crops would be best. Wet-tropical climates are often plagued by pests so crops that are pest-resistant would do well in those climates.
