

SC.912.L.16.13 – Reproductive – Example 1 Answer

A fertilized egg undergoes several stages before it is successfully implanted. The diagram below shows these stages as the fertilized egg travels through the female reproductive system.

In which of the following structures of the female human reproductive system is the blastocyst implanted during normal human development?

- A. ovary
- B. uterus
- C. vagina
- D. amniotic sac

Answer

B. uterus

The blastocyst makes its way down the uterine tube and implants in the uterus.
