

SC.912.L.16.13 – Reproductive – Example 3 Answer

Sperm are created through meiosis in an area of the testes called the seminiferous tubules. Through which structure do the sperm travel to exit the testes?

**A. vas deferens**

**B. seminiferous tubules**

**C. scrotum**

**D. epididymis**

Answer

A. vas deferens

The vas deferens leads out of the testes. Here sperm are mixed with fluids to nourish and protect them. This mixture is called semen and travels out of the urethra into the vagina for fertilization of the egg.
