

# Honor Award For New Work

---

## Roy Hyatt Environmental Center Pensacola, FL Dalrymple|Sallis Architecture

This new facility for interactive environmental science education was constructed on the same rural 300 acre site where the program taught elementary level science classes for nearly 50 years with a focus on teaching students about different local habitats and wildlife. Serving 7,000 students annually, the new facility furthers the goal of expanding the program and integrating it with a 21st century learning environment.

The jury said the project is an environmental science building that's environmentally sensitive and scaled well for the site. A successful design.
